WELCOME TO
THE WORLD OF

UNA

H O M E A U T O M A T I O N

The new generation of the traditional electrical system, where your home thinks exactly as you do.

Imagine being able to control your home, from wherever you are, with the greatest of ease. Imagine turning off all the lights, closing all the blinds before going to sleep with a simple touch from the comfort of your bed.

Imagine setting just the right climate before returning home, turning the outside lights on when you think you will be late, opening the gate or activating your irrigation system, all while being seated in your office.

UNA GIVES YOU **CONTROL**

You can control the status of all the equipment with just one finger, commanding each equipment individually or enabling scenarios.

A simple touch will tell you how much energy your system is using, which equipment is consuming most at that precise moment, and how much your photovoltaic system is producing on a sunny day.

When the bill comes you will be able to check your past use, and optimise it.

Una offers more than the traditional home automation systems: it is designed to have all the functions access to system updates on-hand immediately.

It is easy to use, easy to install and easy to be implemented.

UNA FOR RESIDENTIAL
